

WHO IS SOLSTICE?

Solstice Environmental Management (Solstice) has been providing specialized environmental management services in western Canada since 2002. We help balance traditional ecological knowledge with our environmental expertise to find solutions.

- We are an equal opportunity women-owned and operated business, with gender and racial diversity which includes 30% of our Solstice team being Indigenous.
- Solstice is a team of passionate, interdisciplinary experts who empower our clients to operate in sustainable ways, while prioritizing their unique needs.
- We simplify the science and deliberately center Indigenous ways of knowing, to complement decision-making, communicate effectively, and reduce environmental challenges.
- Our approach to each project is individual and proactive, customizing services according to the type of project and specific client needs – today and into the future.

OUR 3 CORE BUSINESS STRENGTHS

1. ENVIRONMENTAL ASSESSMENT, REMEDIATION, CONSERVATION & RECLAMATION

- The foundational work of the company: where we started in 2002
- Experience on over 3000 contaminated oil and gas sites, including 36 gas plants, and over 300 batteries and satellite facilities
- Experience with hundreds of kilometres of linear developments and surface mining operations
- Experience with full lifecycle oil and gas environmental activities, allowing us to support clients in developing and operating in an environmentally sustainable way

2. LAND USE MANAGEMENT & REGULATORY SUPPORT

- Geomatics (GIS & remote sensing) and environmental sensitivity mapping that supports land use planning and traditional land & occupancy use studies
- Biophysical – soil, wetlands, water, vegetation, rare plants, wildlife, ecosystems
- Environmental, Social & Governance (ESG) support

3. STRATEGIC SOLUTIONS

- Community engagement & capacity building
- Co-developing projects with our partners such as:
 - **The Story of the Land** – ecological and climate study using micropaleolimnology, braiding traditional knowledge and western science
 - **Lands for Prosperity** – regenerative agriculture supporting carbon sequestration, food security and traditional ecological knowledge
